# Carbon Footprint

Fossil CO_2 emissions and biomass carbon stored in the paper

Paper: Hylte Eco Copy   **Company: HYLTE PAPER**
Reporting period: 1 Jan 2023 - 30 Sep 2023

Fossil CO_2
emissions

99 kg CO_2

Biomass carbon
in the product

1549 kg CO_2

Per ton of this paper product:

99 kg/ton of fossil CO_2 were emitted during the manufacturing of this product.

This product contains 422 kg/ton of biomass carbon equivalent to 1549 kg/ton of fixed CO_2.

This Carbon Footprint* has been calculated according to the manual developed by the European Association of Graphic Paper Producers, EURO GRAPH to guide companies to prepare their data sets in line with CEPI's (Confederation of European Paper Industries) " Framework for the Development of Carbon Footprints for Paper and Board Products ". It comprises direct and indirect CO_2 emissions (associated with producing fibre, other raw materials and fuels, pulp and paper production, purchased and sold energy, and inbound & internal transports) and biogenic carbon retained in the paper as leaving our mills, and thus removed from the atmosphere.

10 Toes of CEPI Framework	Fossil CO_2 (kg/ton of paper)	Biogenic CO_2 (kg/ton of paper)
Toe 1 Carbon sequestration in the forest	0	0
Toe 2 Carbon stored in the product		1.549
Net sequestration of biomass carbon		1.549
Toe 3 Emissions from pulp and paper production	18	
Toe 4 Emissions associated with producing virgin or recovered fibre	23	
Toe 5 Emissions associated with producing other raw materials	40	
Toe 6 Emissions associated with purchased or sold electricity and steam	9	
Toe 7 Transport-related emissions	10	
Toe 8 Emissions attributable to product use (e.g. printing)	-	
Toe 9 Emissions attributable to end-of-life-management of products	-	
Toe 10 Avoided emissions (optional)	-	
Total fossil CO_2 emissions	99
